right on-track***

HYDAK® hydrophilic coatings for catheters, guidewires and other medical devices.

Devices coated with Hydak coatings are proven to facilitate diagnostic and interventional procedures. That's because Hydak coatings are based on hyaluronan, a naturally occurring biopolymer found in all body tissues and fluids. This natural lubricant is biocompatible, hydrophilic, and lubricious. As a result, tortuous vessels can be negoti-

ated quickly and safely.

Hydak coatings are non-thrombogenic, and resist protein adsorption and the adhesion of bacteria. These coatings offer consistent performance on a broad range of metallic and polymeric substrates and can be applied to lumens. Take advantage of our 15 years experience in partnership with innovative device manufacturers.

Call us if you have questions or to arrange sample coatings.
